Michele Casale

Research topic:

Establishment of a point of care for the treatment of patients with addictions to substances of abuse and hepatitis C

Abstract:

The research starts from a collaborative project between the SerDs of Cagliari and Quartu S.Elena and the Liver unit of the University Hospital of Monserrato, for a global screening of all drug addicts positive for anti-HCV antibodies. For this purpose, it is useful to have a point of care both in the three SerDs and in the outpatient departments of the Liver Unit of the University Hospital that can act as a linkage, facilitating the diagnostic and therapeutic pathway of patients considered difficult.
